WEBSITE PROJECT PROPOSAL

1. ORGANISATION OVERVIEW

Name: The Daily Grind Café

The Daily Cafe was founded in 2023 in Cape Town, South Africa. The Daily Grind Café is a welcoming local neighborhood coffee shop. Over the last three years, it has grown into a warm and welcoming space where students, employees, and neighbors connect and enjoy some warm coffee and pastries. We focus strictly on serving espresso beverages, teas, and fresh house baked goods. We don't sell whole or ground coffee beans for retail.

Mission Statement: To brighten our community's day by serving amazing coffee and fresh pastries in a warm friendly neighborhood space.

Vision Statement: To be one of Cape Town's favorite local cafés, providing a welcoming environment for our customers, having real human connections and comfortable workspaces.

Target Audience: The Daily Gring Cafe has a variety of audiences that it can cater for being students, workers, neighbors around the business

2. WEBSITE GOALS AND OBJECTIVES

Website Goals

The goal of the website is to create a professional digital storefront that makes our café easy to find via search engines. It serves as an accessible online home to showcase current menu choices and display workspace layouts.

Key Performance Indicators (KPIs)

Inquiries: Secure at least 45 verified unique catering or venue event space submissions every month via our online form within 90 days of site deployment.

Web Traffic: Drive 1,500 unique local website visitors every month during the first quarter by optimizing our content for local search keywords.

Customer Loyalty: Achieve a 15% conversion rate on email sign-ups to build a customer database for weekly menu specials.

3. CURRENT WEBSITE ANALYSIS

We do not currently have a standalone web domain. The café relies completely on Instagram and Facebook profiles to post operating hours, address details, and menu updates.

Strengths: High immediate visual engagement, simple direct messaging capabilities, and an active community of local neighborhood followers.

The Weaknesses: The Cafe doesn't have a web domain, basically making it difficult for customers to find it on Google, which makes it harder for them to contact or book. Makes it harder for customers to find out if there are new updates or specials

Plan for Improvement: Create a website for customers to see new menu/product specials, where the cafe is located and try to get people feedback on the website.

4. PROPOSED WEBSITE STRUCTURE

The website will be developed as a standard compliant, fast, responsive setup with 5 primary interconnected pages:

Homepage (index.html): A page featuring 2 inviting photos of coffee based images, an introduction to our brand and clear buttons to find us or view our menu/product.

About Us (about.html): The history of our café, our local ingredient sourcing practices, and our mission as a Cafe.

Products (products.html): A clean list showcasing our prepared specialty coffee drinks, food items, pricing tiers and allergen disclosures.

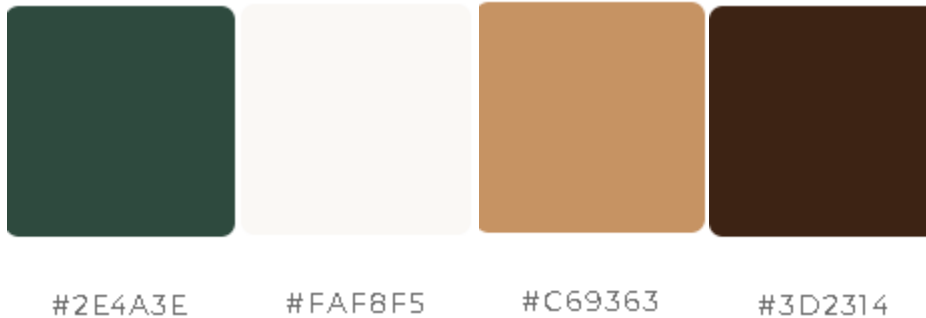

Contact (contact.html): Comprehensive opening hours, physical address location, and an interactive map framework where we also get your feedback on the cafe.

FAQs (faq.html): This is where most of the questions that customers ask are answered, and there will be an option for customers to ask any question by email.

Enquiry (enquiry.html): This where customers can book their seat or to just enquire about something

5. DESIGN AND USER EXPERIENCE

Color Palette Harmony:

Warm Coffee Brown (#3D2314) for primary text headings, Rich Caramel (#C69363) for active buttons, Soft Warm Cream (#FAF8F5) for backgrounds, and Sage Green (#2E4A3E) for natural room accents.

Typography Hierarchy: Large bold headings styled in Aptos Display to provide modern clarity, paired with Aptos Regular at 11pt size (1.5-line spacing) for crisp, readable body text blocks.

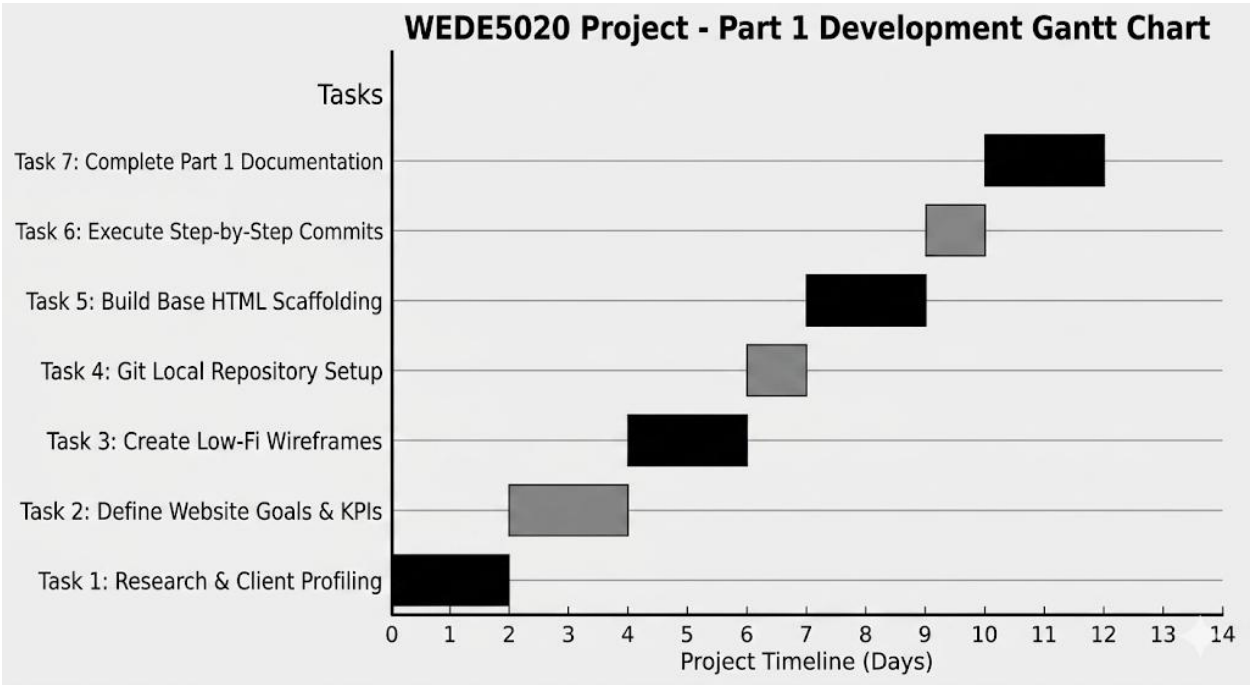

Navigation Mechanics: Elements follow a symmetric layout grid with breathing room. A user can comfortably navigate to any section of the website in two clicks or less.

6. TECHNICAL SPECIFICATIONS

Registration of a localized South African identity (thedailygrindcafe.co.za) deployed via Netlify's high-performance architecture, featuring global asset delivery networks and automated SSL certificate encryption.

Built from scratch using modern, lightweight native benchmarks—pure semantic HTML5 structure, responsive CSS3 grids, and native Vanilla JavaScript (ES6+) for form fields. No heavy frameworks required.

7. TIMELINE AND PROJECT GANTT CHART

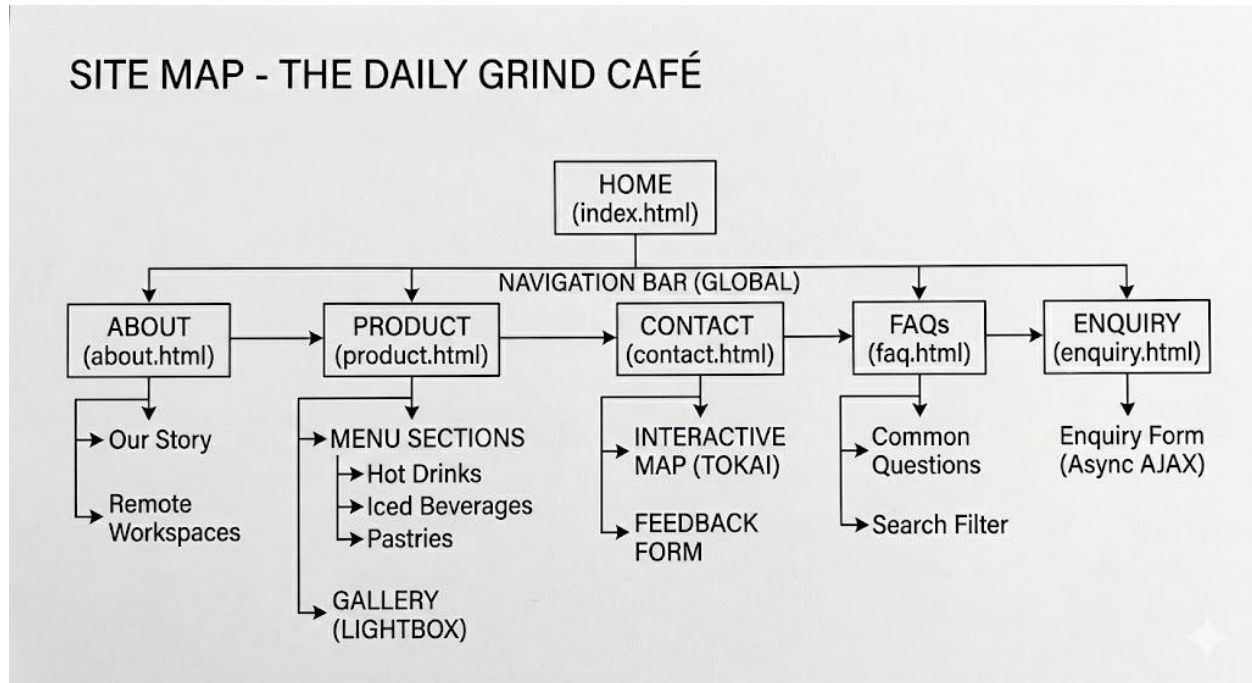

8. BUDGET

Expense Component	Detailed Operational Description	Cost (ZAR)
Domain Registration	Annual premium local domain provisioning via DNS Africa (.co.za registry)	R 500.00
Edge Host Allocation	12 Months scalable cloud web hosting on Netlify high-performance tiers	R 2,800.00
Frontend Architecture	Custom semantic HTML5 structuring, and responsive CSS grids (~35 hours)	R 14,500.00
Asset Sourcing License	Licensing for premium commercial-grade lifestyle café photos	R 1250.00

TOTAL VALUATION	Complete Project Framework Delivery Cost	R 19050.00
------------------------	---	-------------------
